

Bug Report: UI Alignment Issue

Summary: Inconsistent image aspect ratio and misalignment in "Latest Products" section.

Severity: Low | **Priority:** Medium

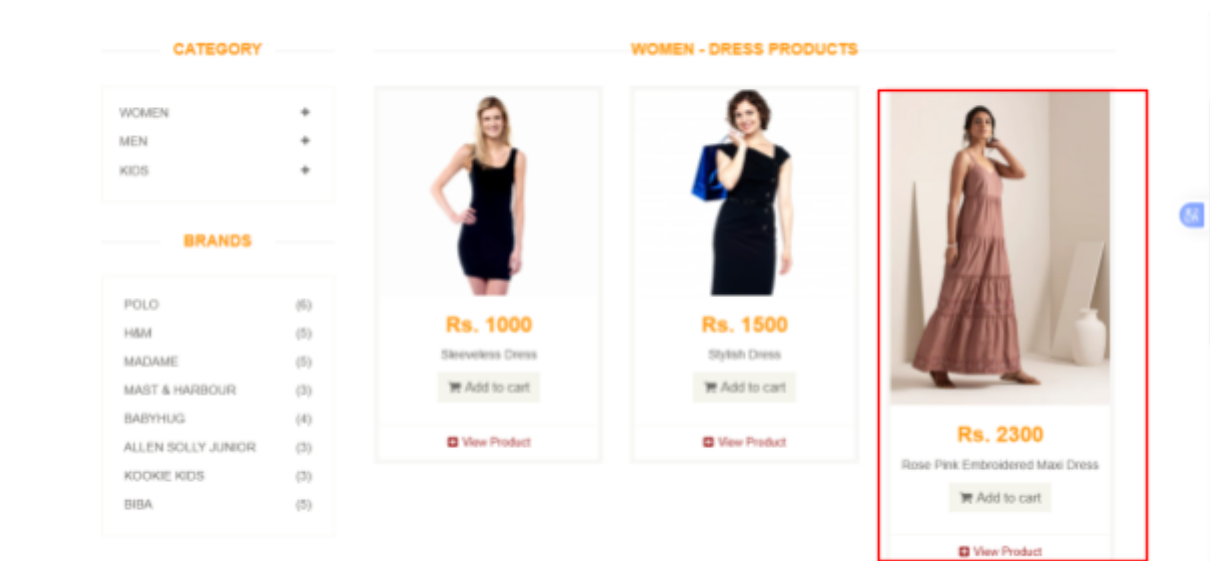

Step to Reproduce:

1. Open the browser and navigate to the Home Page.
2. Scroll down to the **"Features Items"** or **"Latest Products"** section.
3. Observe the first product card on the right side of the screen.

Expected Result : All product images should have a uniform size and 1:1 aspect ratio to ensure all product cards are perfectly aligned horizontally.

Actual Result : The first product image is taller than the others, causing the product name and price labels to be pushed downwards, breaking the UI alignment.

Visual Evidence:

Suggested Fix : Use CSS property `object-fit: cover;` with fixed `width` and `height` for product images to ensure consistency.
